RESURRECTION PLANT.

A MARVEL OF PLANT LIFE

This peculiar and wonderful plant is found among the pines and cedars of Palestine. It is a ball of tightly coiled leaves and stems, apparently dead. In this form it will live a hundred years or more. But a wonderful transformation soon takes place if it is dropped in a bowl of water; for in a short time the whole plant is quickly resurrected and transformed into a rosette of beautiful velvet green, with fern like leaves, both odd and marvelous. It can be resurrected again and again indefinitely-if allowed to curl up and dry each time. (Do not plant them.) The whole plant kingdom cannot show anything more astonishing. It is a rare and beautiful thing-a most interesting curiosity to all.

10 cents each, 3 for 25 cents, postpaid.

It is immensely productive, clusters of four to seven fruits are produced four to six inches apart along the stem. All of the fruits are of marketable size, and many of them are quite large, twelve to fifteen ounces. Always free green core; ripens all over and through and right up under the stem, all at once. A grand, good slicing variety; the seed cells being surrounded by bright red, heavy, meaty and delicious flesh, which is slightly more acid than the Livingston's Globe. The strong outside and inner walls of flesh of the Livingston's Coreless Tomato render it a very firm fruit, and one of the best for long distance hauling or shipping.

**Eggs at 6 2-3 Cents a Dozen.
200 EGGS A YEAR PER HEN.**

By EDGAR WARREN

So great has been the demand for the book,

"200 Eggs a Year Per Hen--How to Get Them," that the fifth edition is exhausted, and a sixth edition of 10,000 copies has just been printed. The great success of this book is due to the fact that poultry keepers throughout the land are coming to recognize it as the standard book on egg making and profits in poultry. The book tells how to get

**The Greatest Number of Eggs
at the Lowest Possible Cost.**

Simple as a, b, c-and yet guaranteed to start hens laying earlier and induce them to lay more eggs than any other method under the sun. From 14 pullets picked at random from a farmer's flock they laid 2999 eggs in one year-an average of over 214 eggs apiece. The author practices what he preaches, and gets eggs the year around at a cost of about 6 2-3 cents a dozen. By laying down his surplus eggs in the spring and selling in the fall, he makes each hen net him \$3.00 a year. Tells all there is to know, and tells it in a plain common-sense way. Price 50 cents.
